

Burners [?] OSE Conversions

Every OSE conversion follows [[Burners Principles]]. The routing tables below are the OSE-specific application.

The clocks already match: OSE turns and rounds are Burners turns and rounds. Durations, torches, and wandering-monster checks run as written.

What Ports Unchanged

- **Turns (10 min) and rounds (1 min)** — all durations as written.
 - **Morale (2–12, checked on 2d6)** — use the module's score directly. A Boss's arts work on it as usual.
 - **Reaction rolls (2d6)** — as written; a character leading the parley adds **Heart**.
 - **Number Appearing, Treasure Type, coin values** — as written; prices are already gold-denominated. Treasure Type hoards convert to gp as written; award **1 XP per gp** only when the crew **recovers it to safety** (see *XP Awards*).
 - **Movement rates** — read as relative speed and reach; resolve in fiction and zones.
 - **XP** — OSE awards for slain monsters (by HD) and treasure recovered to safety (1 XP per gp). Magic items: no XP. See [[Burners Adventure Game]] and the table below.
-

XP Awards

Burners uses OSE XP awards layered on its own level table (see [[Burners Adventure Game]]). Port treasure types and coin values as written; award XP only when treasure is **recovered to safety**, not when first picked up.

Source	Award
Monster slain	XP by Hit Dice (table below)
Coins, gems, jewelry	1 XP per 1 gp recovered to safety
Magic items	0 XP — the item is the reward
Goods & equipment	Sale value in gp, when sold
Exploration (optional)	Small crumb per hex newly mapped or room meaningfully explored — Referee tunes; no fixed number

Spend banked XP to gain a level only in civilization (see [[Burners Adventure Game#Experience]]).

Monster XP by Hit Dice (OSE)

HD	XP	HD	XP
under 1	5	7	950
1	10	8	1,900
2	20	9–10	2,750
3	60	11–12	4,500

HD	XP	HD	XP
4	125	13–16	6,000
5	250	17–20	8,500
6	500	21+	10,000+

For fractional or special HD, use the nearest row or the module’s printed award.

Converting a module hoard. Roll or place treasure as OSE directs. Coins, gems, and jewelry pay **1 XP per gp** when banked in town — not when first pocketed in the delve. Art objects and mundane goods pay at their sale value when sold. Magic items pay **0 XP**; the item is the reward. Split awards among the crew as you prefer.

Monsters

The Stat Line

OSE	Burners
HD	Level, 1:1 — HD is the monster’s level and the spine of its pool (one die per HD). HP: use the printed value (OSE prints 4.5×HD; Burners 5×HD is the same coin). Roll it or nudge it.
XP	Award when overcome — XP by HD from the table in <i>XP Awards</i> (a 1 HD skeleton = 10; HD 2 = 20). Use the module’s printed award if given.
AC	Fold into HP, or Resistance vs weapons if famous for armor — per the table below. Monsters never keep PC AC.
Damage die	Read as the natural weapon’s slots — the dice it throws on the Initiative roll, per the rubric below. A monster has no fixed Damage number; it rolls a pool and spends dice like a character.
Saves	Deleted — route the <i>ability</i> through the Defend Router
Morale	As written
THAC0 / attack bonus	Deleted — there are no to-hit rolls; the pool carries it

AC → HP or Resistance

See [[Burners Principles#Armor and Resistance soak; they never roll]] and [[Burners Referee Guide#Building and Running Monsters]]. **Monsters do not use PC Armor Class.**

Look up the magnitude below (former soak), then pick one lane — do not double-count:

Lane	When	What you write
Fold into HP (default)	Ordinary hide, leather kit, unclear natural AC	Add +2 × soak × HD to HP; no AC, no weapon-Resistance from this AC

Lane	When	What you write
Resistance vs weapons	Famous for armor (knight in plate, dragon scales)	Resistance equal to the soak vs weapons; HP stays printed / 5×HD

Never fold a separate **Resistance** (undead vs blades, magic-to-hit) into HP — that stays as soak with a named weakness.

Magnitude (worn kit or odd hide — same bands):

OSE armor / feel	Soak
Unarmored / AC 9–8 [10–11]	0
Leather / AC 7–6 [12–13]	1
Gambeson (Burners rung)	2
Chainmail / AC 5–4 [14–15]	3
Plate mail / AC 3–2 [16–17]	4
Field/full plate / AC 1–0 [18–19]	5
Better than 0 [20+]	5; excess is usually already Resistance

OSE AC (descending)	Ascending AC	Soak
9–8	10–11	0
7–6	12–13	1
5–4	14–15	3
3–2	16–17	4
1–0	18–19	5
Better than 0	20+	5+, ask whether the rest is Resistance

Worked reads: **orc** AC 6 [13] → soak 1, HD 1 → HP = printed (or 5) +2. **Skeleton** leather AC → +2 HP; keep blade Resistance separate. **Knight** in plate → Resistance 4 vs weapons, no HP fold. **Dragon** scales → Resistance vs weapons at the soak band.

When a PC **loots** a suit of armor off a foe, that kit becomes ordinary Burners AC for the wearer — the monster never wore it as AC on its block.

The Damage Die → the Pool

See [[Burners Principles#Pools, not fixed numbers]]. A monster's pool comes from three sources:

- **one die per Hit Die** — HD is the creature's level and the spine of its pool;
- **dice for its weapon's slots** — a held weapon or a natural attack, read from the damage die below;
- **the scene's Heat as dice** — added to the enemy side once, so a swarm does not multiply it.

A monster spends its pool exactly as a character does: each blow is one die, plus one if the weapon is 3+ slots wielded in two hands, and a fierce or many-limbed foe makes extra attacks by its nature — a wolf bites once, a bear claws twice, a hydra strikes per head — the Referee setting how many, not the HD. It defends as anyone does: one die by default, freely once it has made a melee attack this round (see [[Burners Adventure Game]]).

The damage die sets the weapon's slots — the dice it throws on the Initiative roll (see [[Burners Arms and Armor]]; Class and Slots are not always the same on that catalog):

OSE damage die	Weapon slots
1d4	1
1d6	2
1d8	3
1d10	4
1d12, 2d6+	5

Check: an orc (HD 1, sword d8) rolls 1 (HD) + 3 (sword) + Heat dice. An ogre (HD 4+2, d10 club) rolls 4–5 (HD) + 4 (club) + Heat — the deep pool that lets it act first and hit hard.

Natural attacks are weapons. The damage die sets the slots exactly as a blade’s does, and those dice go into the pool: a wolf’s d6 jaws throw 2, a bear’s d8 paw 3, an ogre’s swat 4. Natural weapons fill no *inventory* slots (a bite can’t be dropped or looted) — the slot count is only its dice on the Initiative roll.

Initiative comes from the pool, not a Class. Initiative is the count of the creature’s dice showing 3 or 4 after each round’s Roll Initiative; the Referee locks order for that round — so a bigger pool (more HD, a heavier weapon, hotter Heat) tends to act earlier on its own, and there is no Weapon-Class order to track. The exceptions the old stat blocks flagged still hold, set by fiction:

- **Shambling** (*the sluggish dead, oozes, rooted things*): **acts last, regardless of its pool.** It still rolls and spends dice normally — a zombie’s d8 hands hit like mauls — but its tempo is weather, not speed.
- **A living spear** (*cobra, ambush-hunter*): acts at the **top of the order regardless of its dice count** — speed and force part ways in a few bodies, and the stat block says so.

Charge (*a beast closing at a run — where OSE pounce/leap riders convert*): a situational bump the Referee adds to the blow — extra dice for the rush, as any situation can add to a blow (see [[Burners Adventure Game]]). This is why the unburdened panther beats the sword line to the strike; **Shambling** things never get it.

Receive a Charge (*maneuver — a braced longer weapon, and you must see it coming*): your thrust strikes **first**, before the rush lands, and the charger’s rush-dice add to *your* blow instead — its force arrives through your point. If it survives and presses in, its attack resolves as normal. This is why the boar spear exists; ambush still beats the unwary, because you cannot brace against what you never saw.

Multi-attack routines (claw/claw/bite): this *is* the core’s “extra attacks by its nature” — the Referee sets how many blows the creature throws (a wolf bites once, a bear claws twice, a hydra strikes per head), each its own blow of its own dice that the target defends against separately. Spread them across several characters, or land them all on one; save the full spread for a foe meant to threaten the whole line.

Spellcasting monsters: convert their list through the Spells section, or skip the list and quote each casting as a blow or a telegraph. A dragon does not need a spellbook; it needs a Breath telegraph and two good tricks.

The Defend Router

An OSE save is a pointer to a Burners subsystem — see [[Burners Principles#Route, don’t reinvent]] and [[Burners Principles#Granular defense, not binary save]]. **2d6 + the fitting Approach** against the Referee’s Cost handles most hazards (see *Approach Roll* in [[Burners Adventure Game]]). Hostile magic uses Fuel Defend against the caster’s cast total (see [[Burners Sorcerie]]). Ask what the save protects, then route it:

OSE says	Burners does
Save vs. Breath	Area effect — see [[Burners Principles#Telegraph the unwinnable]].
Save vs. Poison (or die)	Defend (Craft) to avoid; lingering Cost once it lands. See [[Burners Principles#No instant death]].

OSE says	Burners does
Save vs. Paralysis	Defend (Craft or Sword) at the touch; fall short and you stiffen for a stated clock (ghoul-chill, 2d6 rounds) — recoverable, not permanent.
Save vs. Petrify	Counting doom : repeated Defends (Craft or Sword), each miss a step toward stone; it recovers. Averting your eyes is the counterplay, at the price of fighting blind.
Save vs. Spells / Wands / Rods / Staves	Fuel Defend vs cast total ; roll initiative OOC. See [[Burners Principles#Granular defense, not binary save]] and [[Burners Principles#Harm and effect are separate lanes]]. Ward : adjacent Sorcerer commits $\leq$ Sorcerie Level Fuel to cut the attack, then each ally Defends .
Save vs. Death effects	Shock Check and Wounds , then post-fight help + Craft survival — see [[Burners Principles#No instant death]] and [[Burners Adventure Game#Wounds]].

Which Approach? Craft to dodge a dart, pit, or poison; Sword to force a door, hold your feet, or stay conscious; Heart against fear and horror; Sorcerie to dredge up what you know against the uncanny. The player may argue for another Approach if the fiction fits. When in doubt: Craft to avoid, Sword to endure.

Deriving a Score (when a module needs a raw number)

Burners has no ability scores on the sheet. On the rare occasion a module wants an actual number — an opposed feat of might, a stat-keyed gate — derive one on the fly as **10 + the fitting Approach level**:

Old score	Approach
STR	Sword
DEX, CON	Craft
WIS, CHA	Heart
INT	Sorcerie

So a Sword 3 stands at an effective 13, a Craft 2 at 12. This is a fallback for the odd direct comparison, not a number to track — most endurance routes through a **Defend (2d6 + Approach)** and most contests are a **Pay** or **Deal** roll the same way.

“Magic Weapons to Hit” → Resistance

See [[Burners Principles#Armor and Resistance soak; they never roll]].

OSE says	Burners Resistance	The feel
Silver or magic to hit	Resistance ~3–4 vs mundane arms; silver (or the named weakness) bypasses it entirely	<i>Resistant</i> . Soldiers grind it down slowly; a mob still drags it under; the smart play is the weakness.
+1 or better to hit	High Resistance vs mundane arms — enough that ordinary blows barely tell — bypassed by a legendary/named blade or the stated weakness	<i>Unearthly</i> . Mortal steel is folklore against it; the right edge makes it mortal.

OSE says	Burners Resistance	The feel
+2/+3 or better to hit	Not a bigger number — the same high Resistance plus a weakness that must be <i>discovered</i> , or a fiction gate (<i>it cannot fall while the phylactery stands</i>)	<i>A puzzle wearing a stat.</i>

Every Resistance above a point or two **names its cause** — see [[Burners Principles#Armor and Resistance soak; they never roll]]. A named weakness **ignores** Resistance, the way a Bane-forged weapon ignores its quarry's soak (see [[Burners Arms and Armor]]).

Energy drain (wights, wraiths, spectres): **no levels lost**. A successful drain touch deals damage to **HP**; the **Wound** opens only on overflow **past 0** (negative energy, negative hit points). After the fight: help + Craft survival, or die. If you **die from that creature's attack** after a Wound from it, its **monster special** may fire (rise as spawn, and so on) — write it on the block; telegraph it. See [[Burners Principles#No instant death]].

Mobs vs. the unearthly: see [[Burners Principles#Armor and Resistance soak; they never roll]].

Checks, Doors, and Skills

A module check splits two ways. A trained or skilled attempt — thief skills, foraging, listening at doors — becomes **2d6 + fitting Approach vs. Heat**, quoted as a **Pay** (the world acts on you — shortfall is the cost) or a **Deal** (you act on it — shortfall is no purchase). A raw attribute check with no skill behind it — bend bars, leap a chasm, stare down a horror — is the same: 2d6 + Sword, Craft, or Heart vs the Referee's Cost.

OSE chance	Heat
5-in-6	6
4-in-6	7
3-in-6	8
2-in-6	9
1-in-6	10

Stuck doors, thief skills, foraging, listening at doors — all this table. A trained Approach shifts the odds; that is the point of being a Burner.

Traps and environmental damage — see [[Burners Principles#Pools, not fixed numbers]] (*Traps*). Average the module die to flat Damage; detect or eat.

Worked in the margin — the OSE zombie (AC 8 [11] · HD 2 (9hp) · 1 × weapon, 1d8 · Morale 12):

Zombie. HP 9 (as printed; soak 0, no fold) · pool = 2 (HD) + 3 (d8 fists) + Heat dice · **Shambling** — acts last · Morale 12 as written · **XP 20** (HD 2).

Read straight off the printed block — HP (folded if the AC had soak), the two numbers that build its pool, Resistance-if-any, its tempo, its Morale.

Spells

Port OSE spells onto [[Burners Spells]] when a match exists; otherwise write a one-line effect in the same format (School L: ...).

- **Spell level = cast level L.** Hand holds prepared cards; Arcana slot count sets hand size; drip rides in Arcana slots at full item cost. Sleep recovers up to caster Level cards (untap/burn/lasting); redraw or one-hour swap needs a readable source.
 - **Durations and ranges as written** — the clocks match.
 - **Casting (combat):** one Action; spend at least L Fuel dice, roll them — cast total = sum of faces. Tap the card. On a Spark, may spend up to L additional Fuel for extra effect. May burn ready cards in the same Action to recast or copy.
 - **Casting (NPC / module caster):** roll at least L dice for the cast total the same way. A hostile cast **rolls initiative** if no fight is underway.
 - **Defense and damage:** see [[Burners Principles#Granular defense, not binary save]] and [[Burners Principles#Harm and effect are separate lanes]]. Ignore OSE per-caster-level dice and fixed damage lines; overrun to HP 1:1. *Save for half* does not port.
 - **Scrolls** require a **Sorcerer** (or Journeyman + Canting for Canting) — single-use items, any form; not cards (see [[Burners Sorcerie]]).
-

Magic Items

Potions, rings, cursed items, and wondrous items port **as written** — they are fiction plus a rule, and the fiction is the value. **Magic items grant no XP**; the item is the reward (see *XP Awards*). Wands and staves that fit **Wizard Drip** ride in Arcana slots at full slot cost (finds, not shop goods — see [[Burners Sorcerie]]); they do not add hand cards. Item powers run as magic items, or for a one-off keep charges as a simple budget.

+n Arms, Shields, and Armor → Enchanted + Powers

Convert +1 sword, +2 shield, +1 plate, and so on per [[Burners Referee Magic Items]] — extra die, +n powers, Tuned / Bane / relic ladders, and the OSE power menus all live there. Trait for the extra die: [[Burners Adventure Game#Enchanted Arms and Armor]]. Keep Slots, AC, and size as the mundane piece.

Potions, rings, and wondrous items stay as written above. Do not raise AC or size for a plus.

Watchpoints

- **Lethality is comparable** — B/X at low levels is brutal and Burners characters are lean. Large mobs can spike past any defend; use swarm splitting and chokepoints.
 - **Foreshadowing is mechanical** — see [[Burners Principles#Heat is scene pressure]].
 - **Solo bosses** need HP enough to survive the party's first-round burst, or they die before their first telegraph.
 - **Don't double-count dread** — see [[Burners Principles#Heat is scene pressure]].
-

Read the stat block once, write it in the margin — HP (folded AC if any), the pool (HD + weapon slots), Resistance-if-any, XP by HD — route the saves through Defend, and run it.
